

There are 2 files for some regions. Those, which have suffix "\_corrected" are corrected at home according to our knowledge where we have lost. Please be carefull in those places!

List:

1. Kanchenjunga. Lumba Sambha pass. We took wrong valley, the same as Americans in 2013. Correct valley is a bit forward. (17.03.2016)
2. Makalu. Thudam – Chyamtang. Be very carefull! Not only our group was lost in this part! If you took this way, then our real (not corrected) GPS track helps you reach Chyamtang :) But better avoid! (20-21.03.2016)
3. Everest. Corrected version contains track, if you decide to skip Ambhu Labsta pass and after Baruntse BC directly follow to Mera pass. Original track contains correct way to Ambhu Labsta. (09-11.04.2016)
4. Rowaling. Trakarding Lake. We took wrong way in the beginning of the lake. When you lost last stone cairn, correct way is UP! We started to traverse this very dangerous slope with a lot of falling stones. Be very carefull in this place, go up! (22.04.2016)
5. Manaslu. After Myangal Bhanjyang it is easy to miss the correct turn. The right turn is located on the height approx 2700m (12.05.2016)

Other notes:

All GHT 2016.gpx – File with all original tracks merged into one file.

All GHT 2016 corrected.gpx – File with all corrected tracks merged into one file.

All GHT 2016 100000.gpx – File with all original tracks merged into one file into one track. Track's point number is reduced from 220000 to 100000 using <http://www.gpsvisualizer.com>

All GHT 2016 corrected 85000.gpx – File with all corrected tracks merged into one file into one track. Track's point number is reduced from 220000 to 86000 using <http://www.gpsvisualizer.com>
